

multiplayer vibecoding for building real apps

comment → cook → verify → self-heal → pr → live

AI builds fast. nobody can trust what it built.

what the agent says

RUN LOG

tests passing

anyone · desk or phone

cook $\rightleftharpoons$ verify

a gate decides done, not the
model

pr · live

PR #214 ready ✓

✓ verified on device

the dev reviews. the board
repaints.

nobody watches a terminal.

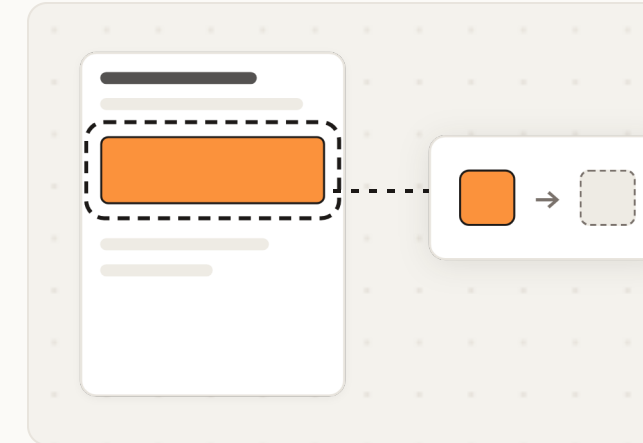

four surfaces, one loop

01

atlas

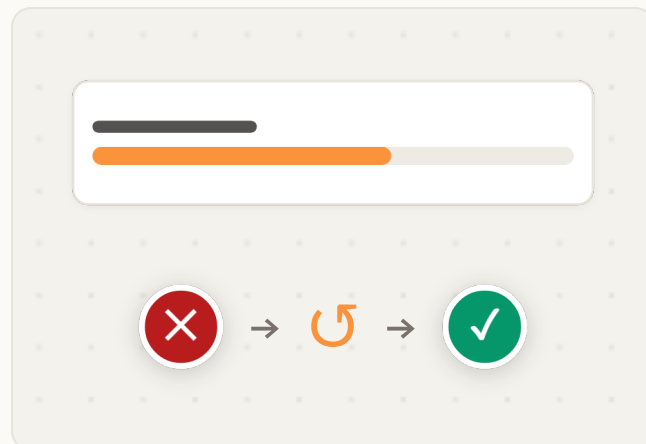

the living map of every screen
and flow

02

visionboard

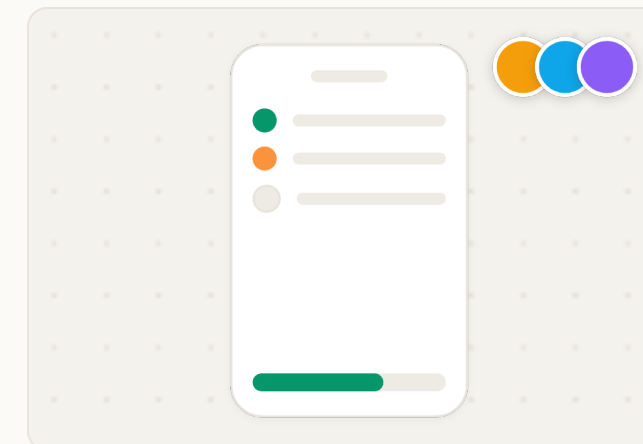

design drift, named, not
argued about

03

the loop

self-healing runs; a gate
decides done

04

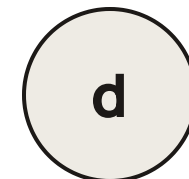

cockpit

every app you're building,
from your phone

the economics of “everyone runs agents” just flipped.

founder

one live board

everyone contributes **compute**, not just opinions.

review becomes the dev's only job.

v1 is live. we ship with it every day.

on-device verification, the hard part, **already works**

sharingu · pre-seed · jul 2026

the wedge is where the pain is sharpest.

☒ **start** indie mobile devs hitting the real-device wall

☐ **expand** vibe-coding teams, every teammate a seat

☐ **horizon** everyone who can think can build

`github copilot passed 20M users, microsoft, 2025`

everyone else picked one player.

agent IDEs

single-player

 multiplayer

prototype builders

demo-only

 ✓ verified on real devices

QA tools

dev-only

 ✓ anyone triggers a run

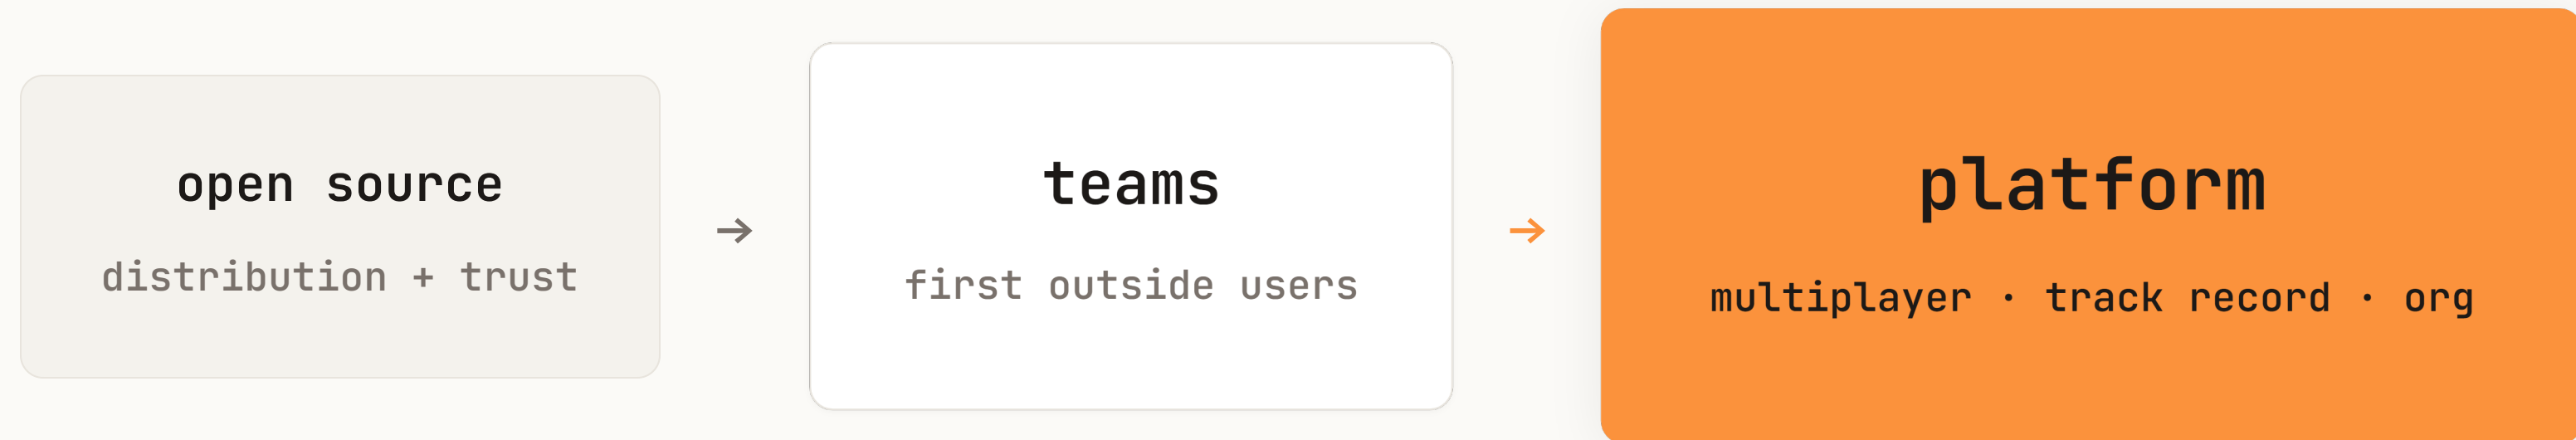

cloud agent platforms

metered keys • their infra

 ✓ local, private, your own subscriptions

the dev's only job: **review**

open source is the wedge. the platform is the business.

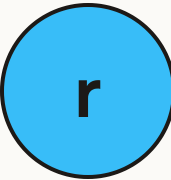

the next-era metric: **verified production updates shipped per day.**

built by the team that ships with it daily.

+ the teammate
that checks
everyone’s work

ryuk labs fc llc, dubai. sharingu QA’s the firm’s own product portfolio.

sharingu · pre-seed · jul 2026

thank you.

anyone comments. agents cook. every change verified on a real device,
before the dev ships it.
